

Orion
Safe

Enterprise-Grade Treasury Infrastructure

The secure, programmable solution for managing institutional assets
on Stellar. Built natively on Soroban.

OpenZeppelin Framework

Native Soroban

Enterprise Ready

Stellar's Enterprise Users Lack Treasury Tools

Stellar has unprecedented enterprise adoption, yet no enterprise-grade treasury management solution exists.

Partners & Treasury Needs

Partner	Use Case	Treasury Need
 MoneyGram	Global Remittances	Operational Treasury
 Circle (USDC)	Stablecoin Issuance	Reserve Management
 Franklin Templeton	Tokenized Fund	Fund Administration
 U.S. Bank	Stablecoin Testing	Institutional Controls
 UNHCR	Refugee Aid	Multi-party Disbursement
 Flutterwave	Africa-EU Remittances	Cross-border Treasury

Critical Gap

NO enterprise-grade treasury management solution exists.

-  No spending limits
-  No policies or roles
-  No DeFi integration
-  No compliance/audit tools

Current Options

 **LOBSTR / Solar**

Basic Multisig Only

Perfect Timing for Stellar Treasury Infrastructure

Three converging forces are creating the perfect moment for Orion safe.

01

SOROBAN MATURITY

Technology Ready

- ✓ Smart contracts now production-ready
- ✓ 5,000 TPS scaling roadmap
- ✓ Growing DeFi ecosystem

02

OPENZEPELIN ACCOUNTS

New Framework (Dec 2025)

- ✓ Professional-grade framework just launched
- ✓ Context rules, signers, and policies
- ✓ No one has built on it yet

03

ENTERPRISE DEMAND

Real Adoption

- ✓ MoneyGram app live with USDC
- ✓ 15+ new enterprise partners in 2026
- ✓ Institutions need compliant treasury tools

MARKET STATE:

◆ Ethereum (Safe)

Secures \$100B+

👤 Solana (Squads)

Secures \$10B+

ARCHITECTURE

Built on OpenZeppelin

Leveraging battle-tested infrastructure instead of reinventing security.

STELLAR SMART ACCOUNT FRAMEWORK

WHAT (Context Rules)

Define scope: which contracts, which functions, and which operations are allowed.

WHO (Signers & Verifiers)

Authentication: Ed25519, P-256 (WebAuthn/Passkeys), and other Soroban accounts.

HOW (Policies)

Enforce constraints: spending limits, approval thresholds, time locks.

★ Why This Matters

- ✓ **Audited by Experts:** Security validated by OpenZeppelin team, the industry standard.
- ✓ **Modular & Extensible:** Allows adding new policies without redeploying the core.
- ✓ **Protocol 23 Optimized:** Built specifically for Soroban's efficient cross-contract calls.
- ✓ **Product Focus:** We build the user experience, not the low-level cryptography.

FIRST MOVER We are the FIRST to build a full product on this framework.

Enterprise-Ready From Day One

A complete suite of tools to manage institutional treasury securely and efficiently.

Programmable Spending Policies

Token	USDC
Daily Limit	\$50,000.00
Max Single Tx	\$10,000.00
Destinations	Whitelist Only ✓
Approval	2-of-3 Signers

*Configured via Smart Contract

Role-Based Access Control

Role	Permissions
Admin	Modify policies, add/remove members
Proposer	Create transactions
Voter	Approve/reject transactions
Executor	Execute approved transactions
Spender	Withdraw within policy limits

Time Locks & Safety

- Configurable Delay** for high-value transactions
- Emergency Cancel** with higher threshold
- Automatic policy enforcement without manual oversight

Native USDC Support

- First-Class Operations** for Stellar's dominant stablecoin
- Integration ready for **MoneyGram** ramps
- Optimized for instant cross-border payments.

WHY STELLAR IS PERFECT

Technical Advantages We Leverage - We're not just building an app, we're leveraging protocol superpowers.

Stellar Feature		Vault Application
 Native Multisig	→	Security foundation already at protocol level
 Soroban Smart Contracts	→	Programmable policies via OpenZeppelin
 Sub-second Finality	→	Real-time treasury operations
 \$0.00001 Fees	→	Cost-effective for enterprises
 Native USDC	→	Seamless stablecoin treasury
 MoneyGram Integration	→	Built-in Cash On/Off Ramps
 Regulatory Alignment	→	SDF works with regulators
 Stellar's DNA is enterprise finance — we're building the missing treasury layer.		

TARGET USERS

Who Needs Orion safe: Essential infrastructure for the institutional ecosystem.

Anchors & Fintechs

Operational treasury and asset reserve management for on/off ramps.

50+ Active Anchors

NGOs & Aid Orgs

Secure multi-party fund disbursement and transparency (e.g., UNHCR).

UNHCR/WFP Use Cases

DeFi Protocols

Protocol treasury management and Soroban development funds.

Soroban Ecosystem

DAOs

Community governance and emerging collective treasury management.

Emerging Sector

Enterprises

Corporate treasury, payroll, and supplier settlements (MoneyGram).

MoneyGram & Partners

Fund Managers

Tokenized fund administration based on Franklin Templeton (Benji) model.

Tokenized Assets

🎯 SDF 2026 GOAL 15+ new enterprise partners with 5 live use cases — All require treasury infrastructure.

First-Mover in a Greenfield Market

Current solutions fail to meet institutional needs. Orion safe fills this gap.

☰ Solution Comparison

Solution	Status	Limitation / Advantage
 LOBSTR	Basic Multisig	No policies, no enterprise features
 Solar Wallet	Basic Multisig	Limited functionality, consumer UX
 Scopuly	Mobile Focus	Not enterprise-grade, individual management
 Freighter	Developer Tool	No treasury features or team management
 Orion safe	 Full-Stack	✓ Policies, Roles, DeFi, Compliance

🛡️ Our Strategic Moat

 **First on OpenZeppelin**
12+ month head start on competition

 **Enterprise-Native**
Built for Stellar's actual users

 **USDC-Optimized**
First-class stablecoin support

 **Compliance-Ready**
Audit trails & reporting from Day 1

 **SDF Alignment**
Supporting enterprise growth goals

VISION

“

“Orion safe becomes the default treasury layer for every enterprise, anchor, and protocol on Stellar — making institutional-grade asset management accessible to the entire ecosystem.”

”

Phase 1 (Current)

Treasury Management

Multisig foundation, spending policies & roles (This Grant).

Phase 2

DeFi Strategy Vaults

Automated capital deployment into Soroban yield protocols.

Phase 3

Payment Automation

Disbursement workflows for payroll and cross-border settlements.

Phase 4

Multi-Chain Expansion

Unified asset control across Stellar, Ethereum and other chains.
